

## Bio-Kick Probiotic Powder for Toddlers Strawberry

Model : 400320

Bio-Kick advanced probiotic for the mouth, ear, nose and throat. Also great for immune support.

Our mouths are lined with various health-promoting bacteria, some of which are integral to health and disease. One very common bacteria found in the mouth of healthy humans is *Streptococcus Salivarius*. Among the most numerous beneficial bacteria in your mouth, *Streptococcus Salivarius* is typically the first one we acquire naturally as infants. Some speculate we get it through our mother's or father's first kiss.

The effects of Bio-Kick are more significant with children who have recurring throat infections. University of Otago's research shows that children with recurring throat infections had less healthy bacteria in their throats. This is something that occurs naturally. You either have it, or you don't. If you don't, and you take Bio-Kick, it improves the healthy bacterial population and makes you less susceptible for example to sore throats. And of course, sore throats are often at the heart of middle ear infections. In fact, Italian clinical trials of *Streptococcus Salivarius* showed over 90% reduction in doctor visits, days off school and, of course, days off work for parents looking after sick children.

A healthy toddler means less time off work for working parents.

Sprinkle level 1/4 teaspoon of Bio-Kick Toddler Powder over food just immediately before serving, 1-2 times per day.

To get best results, avoid sprinkling on food over 30°C This would affect Bio-Kick's bacterial viability.
